Meeting records 📄 Transcript 🎙 Recording

Summary

Team reviewed inventory and invoicing workflows while identifying dependencies for future system integration.

System Integration Challenges

Discussions focused on synchronizing Salesforce and QuickBooks data for product titles. The team determined that centralized list management requires further input.

Invoicing and Inventory Logic

Participants confirmed current inventory and invoicing logic for various agreement scenarios. A column will be added to track invoice due dates.

Inventory Management Strategy

The team agreed that committed and available inventory must remain separated. Logic for buffers and teacher books will be replicated within Salesforce.

Decisions

We've **updated the Decisions section** using your feedback.

Let us know what you think: [Helpful](#) or [Not Helpful](#)

NEEDS FURTHER DISCUSSION

- **Product title maintenance process deferred** The strategy for maintaining product titles across QuickBooks and Salesforce is placed on hold pending input from Maria.
- **Inventory management design deferred** The design of inventory management logic, specifically regarding committed versus available stock and inventory swapping, is placed on hold pending input from Maria.

ALIGNED

- **Multi-year contract logic finalized** The logic for managing multi-year contract scenarios and payments is validated and accepted as the business rule.

Next steps

- ☐ [kailash chanda] Add Column: Add invoice due date column to the worksheet. Base new column logic on discussed scenarios.
- ☐ [Holly Wale] Prepare Calculation Logic: Document specific calculation logic for intensified algebra and integrated math units. Have logic ready for future discussion.

Details

- **Initial Agenda Discussion and Title Management:** The team began by attempting to address questions related to an Excel sheet, specifically concerning the addition of new titles and fields by Abby into both QuickBooks (QB) and Salesforce (SF). Holly Wale expressed concern about maintaining two separate lists for what is fundamentally one list, suggesting Maria's input is needed to determine the ideal location for the list to reside ([00:00:00](#)). The conversation shifted towards using an example involving a product with different versions for states like Maryland, highlighting the difficulty in proceeding with discussions about product entry into QuickBooks without Maria, as Holly Wale has limited visibility into the QuickBooks aspect of the project ([00:01:04](#)).
- **Inventory and Invoice-Related Topics Needing Further Input:** Discussions regarding how to handle cases where an ISBN is not found, which will be put up for manual review, were confirmed as correct. A custom inventory object is intended for development within Salesforce to maintain inventory levels for reporting and reconciliation, combining data from both QuickBooks and Salesforce for a single review point ([00:03:13](#)). However, complex questions regarding the invoicing process, particularly when it is tied to fulfillment versus a contract date, were deemed to require the input of Crystal and Maria ([00:04:19](#)).
- **Invoicing Timeline and Budget Considerations:** Abby Dawson provided clarification on the current invoicing practices, noting that for early orders (January through March), the invoice is generally not due until July or August. Crystal, following Maria's preference, typically sends the invoice as soon as it can be created but sets the due date to align with when the school budget opens. Orders placed during the summer are usually due within 30 days since the budget is already open, and currently, none of these invoicing timelines are tightly linked to inventory ([00:05:23](#)).
- **Review of Agreement Scenarios and Inventory Logic:** The team confirmed their understanding of various agreement scenarios presented in a worksheet, including regular single-year, multi-year one-time payment, multi-year pay-over-time, and a "new year with zero dollars" opportunity ([00:06:21](#)). The logic for all presented inventory scenarios was confirmed as correct by Holly Wale and Abby Dawson, but they reiterated the need for Crystal and Maria to review the details ([00:07:10](#)). Kailash Chanda committed to adding a column for the invoice due date to address the scenario of orders coming in earlier in the year ([00:08:11](#)).

- **Committed vs. Available Inventory Management:** Holly Wale stressed the necessity of keeping committed inventory separate from available inventory, explaining that this separation allows them to strategically move inventory to fulfill a new, urgent order while still ensuring an older, committed order is fulfilled later as new inventory arrives ([00:09:12](#)). The current system involves a highly manual process in an Excel worksheet where projected shorts are marked in red ([00:12:29](#)). Holly Wale acknowledged the challenge of figuring out where the inventory swap decision-making should occur—Salesforce or QuickBooks—and indicated that Maria's input would be required for this aspect ([00:10:21](#)).
- **Automation of Order Processing and Inventory Categorization:** The team discussed how automating order processing would categorize opportunities, confirming that their existing internal categorization (50-60% or 10-90%) would remain the same. Holly Wale uses a detailed demand worksheet that tracks closed-won business and projects needs based on various probability categories ([00:15:36](#)). This demand worksheet also includes a 3% buffer for specific products (intensified algebra volume one and intensified integrated math volume one) and accounts for teacher books, details which are currently not fully represented in Salesforce but should be for a full system integration ([00:16:42](#)).
- **Need for Future Meetings with Maria and Crystal:** The conversation concluded with the understanding that the logic used in Holly Wale's demand worksheet for calculating the buffer and teacher books will need to be replicated in Salesforce ([00:17:50](#)). The team agreed that another call will be necessary once Maria and Crystal are available to address the remaining questions regarding QuickBooks integration, invoicing, and complex inventory allocation scenarios .
