Implementation Partner

What We Heard: LeoLabs' Current State

The "Pain" (The Status Quo)

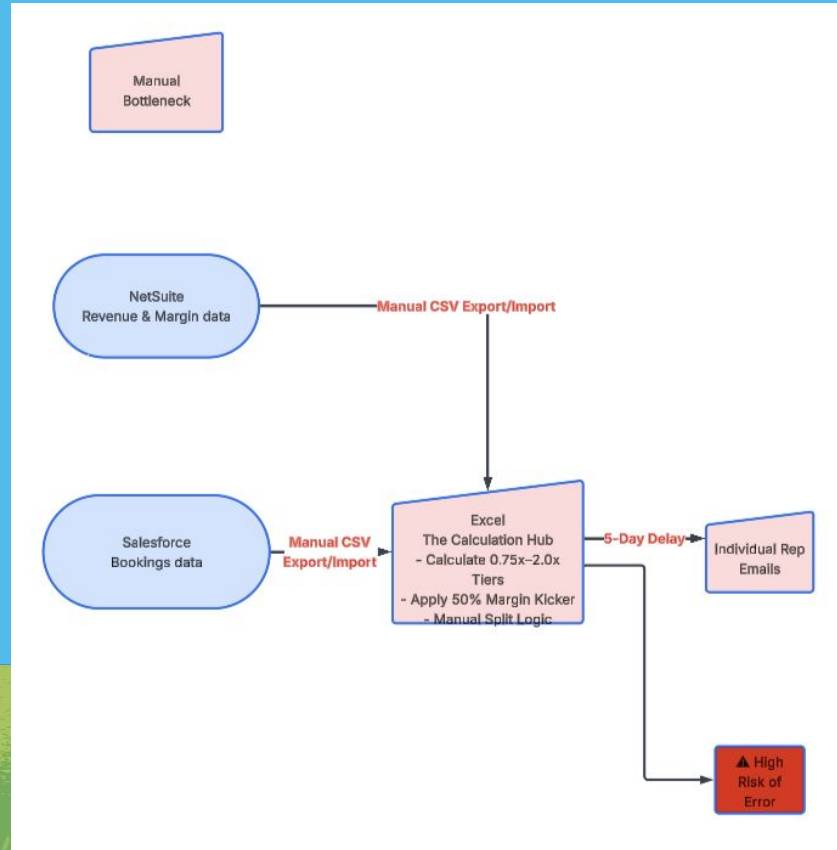

- **Manual "Spreadsheet Hell":** Currently calculating commissions for 25–30 reps manually across disparate spreadsheets.
- **The "Data Drag":** Manually pulling data from **Salesforce** and **NetSuite** and merging them in Excel.
- **Error Prone & High Stress:** Manual tier-calculation errors leading to extreme user frustration.
- **Shadow Visibility:** Reps have zero real-time visibility; manual "excerpts" are a massive time sink.

The "Need" (The Requirements)

- **Self-Service Flexibility:** Quickly change tiers and accelerators (e.g., 50% margin kicker) without support tickets.
- **Scalability for Complexity:** Support for complex splits, mission-based territories, and international expansion.
- **System Integration:** Automated flow between Salesforce, NetSuite, and the commission tool.

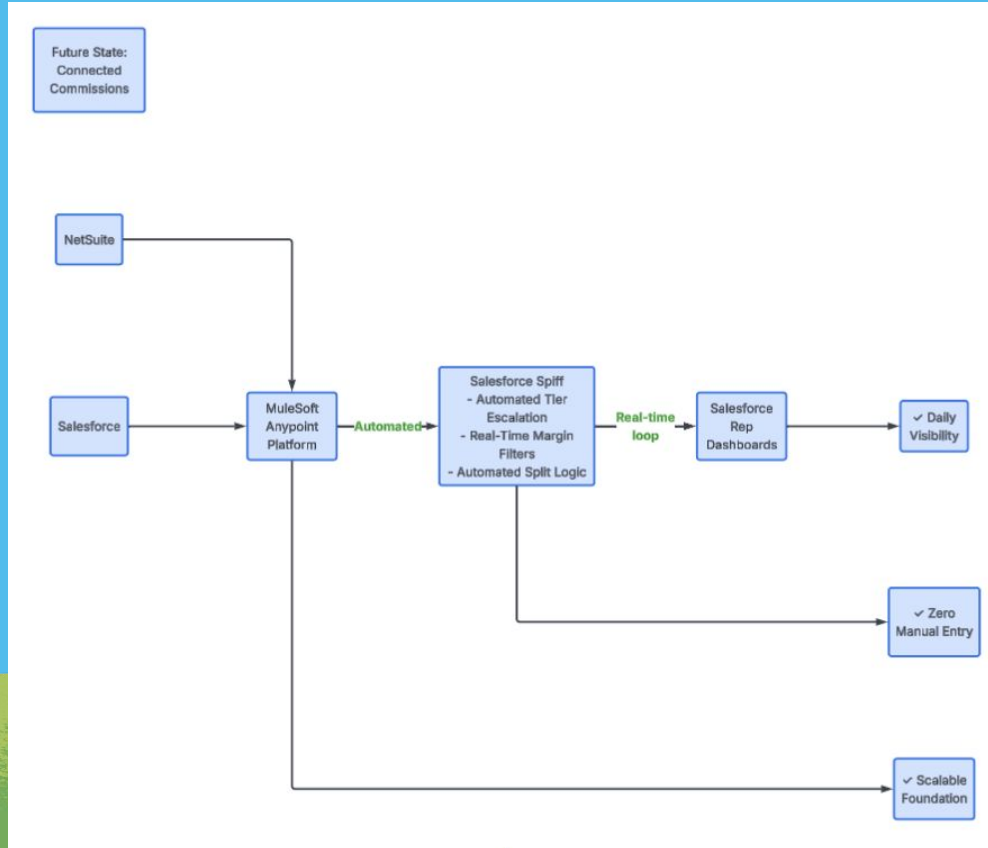

LeoLab's Current State

Get started quickly with hundreds of templates, APIs and governance rules from the MuleSoft ecosystem

Automate complex processes, and invoke agent actions across any system

Centrally manage, govern, and secure your data and APIs with end to end visibility, monitoring, and error handling

Build an agent-ready foundation with connected systems, models, and apps

78% faster time-to-market
with accelerated
delivery speed

400+
Out of the box APIs, connectors,
templates, and accelerators

30% Reduction in costs when
leveraging MuleSoft vs
alternative options

Anypoint Integration Pricing Metrics

Flows and Messages

salesforce

Breadth of deployment

Mule Flows

Number of integration “pipes” built.
Captures the amount of logic built on MuleSoft.

Volume or intensity of use

Mule Messages

Data Throughput

The “volume of water moving through the pipes”.
Captures magnitude of transactions and
data that is moved through the platform.

Premier Success Plan for MuleSoft

salesforce

Features of the Premier Success Plan

Targeted guidance and best practices via Expert Coaching Sessions and Office Hours
