

LeoLabs Sales Performance Management (SPM)

Customer Context: LeoLabs is a high-growth aerospace startup (40% YoY growth) moving from manual spreadsheets to **Salesforce Spiff**. They are currently managing ~30 reps but face increasing complexity with US Government (USG) and International deals.

The "State of Play"

- **CRM:** Salesforce (Source of Bookings & Territory data).
- **ERP:** NetSuite (Source of Revenue, Backlog, and Margin data).
- **The Problem:** The "Middle" is currently a manual Excel nightmare. Data is exported from NetSuite/SFDC and manually merged to calculate tiers, splits, and margin-based "kickers."

Technical Scope for Implementation

- **Phase 1 (Immediate):** Stand up **Spiff** to handle core commission logic (Individual/Team quotas, tiered multipliers from 0.75x to 2.0x+).
- **Phase 2 (Crucial):** Automated integration via **MuleSoft** (or Spiff's native connectors) to pull **NetSuite Revenue** and **Salesforce Bookings**.
- **The "Kicker" Logic:** Implementation must handle a **50% Margin Rule**—if a deal's margin is $\leq 50\%$, the commission rate is automatically cut in half.
- **Complexity:** Must support multi-party **Split Credits** and "Mission-based" USG territory assignments (shifting away from simple geography).

Key Success Criteria

1. **Eliminate "Human API" Work:** Claudia (Sales Ops) must stop manual CSV uploads from NetSuite.
2. **Real-Time Rep Visibility:** Move from quarterly "spreadsheet excerpts" to daily visibility via a nightly sync.
3. **Admin Self-Service:** The system must be configurable so Ops can change tiers/rates in minutes without coding or tickets.

Implementation Partner "Watch-Outs"

Budget Sensitivity: The customer is a smaller organization and is wary of "Xactly-sized" implementation fees. They are looking for a phased, agile approach rather than a massive 6-month "big bang" rollout.

Data Cleanliness: The Core AE (Jake) is currently working with the accounting team to "beef up" NetSuite to better identify Salesforce-originated deals. The IP will need to coordinate on these field mappings.
